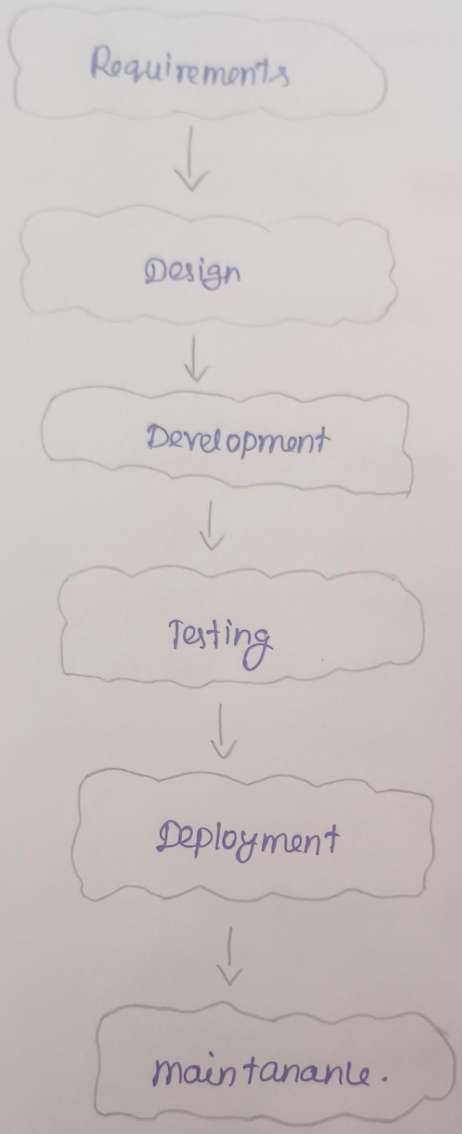
Waterfall Model :



Requirements :

Gathering the requirements from customer.

preparing list of questions.

Send The clarifications to The customer through Bussiness Aalyst and get it clarified.

freezing the requirements.

Design :

Dev Architecture designs the high level Design Document.

Dev software Engineer designs the low level Design document.

The Engineer design Test cases.

coding :

Software development process starts here in this stage.

Dev team ~~softo~~ starts to write code.

Developer sends the code for review.

Dev changes The code based on review comments.

Testing :

Testing team starts different types of testing.

Performs smoke test once the fresh Build received from dev team.

Once the smoke tests is pass, the Team will continue with full functional Testing.

Deployment :

Dev pushes the complete code to remote repository like Github or some other version control system.

Maintenance :

In this stage, the User or customer may ask for some small changes in the software.

The changes happening in this stage in this stage is after the full release of the software product.

Agile Model:

The agile model is an interactive and incremental approach to project management and software development that prioritizes flexibility, customer collaboration, and quick delivery.

Scrum.
Kanban.

Scrum:

A popular framework that uses fixed length iterations with specific roles (product owner, scrum master, Development team) and events (daily Scrums, spring planning).

MOM- Minutes of Meeting.

MOM is document which contains the discussion and action items gathered from the meeting.

Kanban :

Todo -> In prgress -> Done

Backlog -> Todo -> Dev in progress -> dev done -> Test in prgress -> Test done -> completed deployment.

Dev :

Backlog : Tasks awaiting assignment.

Todo : Tasks ready to be picked up.

In progress : Tasks actively being worked on.

Code Review : Tasks Under Review by peers.

Done : completed tasks.
